INITIAL SITUATION AND BENEFITS FOR THE CUSTOMER

4C creates an environment in which the change of business applications becomes controllable.

Initial Situation

_Business applications are a central success factor for companies

_Digitization and regulatory changes are drivers for new requirements

_Costs and risks of the operation of old business applications increase continuously

Challenges

_The change of central business applications is one of the most risky projects of a company

_Despite standardization, considerable investments are required for the renewal of business applications

_Large transformation processes are rare, own experience values in the enterprise lie far behind

Benefit from our experience

The transformation is planned and implemented appropriately

_Key figures for the transformation are continuously available. Contents, budgets and dates of the transformation are realistic and feasible

_Management is able to control the transformation.

_Corporate management can concentrate on defining goals and guard rails

_Best practice approaches and lessons from comparable transformations are available

The introduction or change of business applications becomes controllable.
